

Sofia Fotiadou – Research Manager

Sofia oversees the Tourism and Environmental Health in a Changing Climate project funded by GIZ in collaboration with the International Sustainable Tourism Initiative at the Harvard T.H. Chan School of Public Health. She oversees the analysis of indicators for an international reporting system on biophysical, social, and health indicators to be integrated into the Post-Paris COP 21 system.

Sofia holds a Master's degree in Sustainability and Environmental Management from Harvard University Extension School. During her Master's degree she undertook extensive research on Mediterranean tourist destinations with a focus on direct and indirect impacts of tourism's water and energy consumption, short and long-term effects of climate change on destinations, and carbon accounting of tourist accommodations. Sofia has a strong technical background with many years of experience in buildings, infrastructure design and planning. Her interests include sustainable tourism, green buildings and infrastructure, and circular economy.
